

Tsinghua Direct-entry Ph.D.	3 Accepted Papers	First/Co-first Author on All	Tencent Deployment
-----------------------------	-------------------	------------------------------	--------------------

EDUCATION		
Tsinghua University	Ph.D. in Control Science and Engineering	Sep 2025 - Jun 2030
• Direct-entry Ph.D. student; currently in the first year of study		
Chongqing University	B.Eng. in Computer Science and Technology	Sep 2021 - Jun 2025
• GPA 3.91/4.00, ranked 1/323 (top 0.3%); National Scholarship; First-Class Scholarship		

INDUSTRY RESEARCH EXPERIENCE		
Tencent	IEG Algorithm Research Center - Research Intern	Jun 2025 - Dec 2025
WATCH: World-aware Allied Trajectory and pose reconstruction for Camera and Human (Co-first Author; Core Contributor; Accepted)		
Keywords: Video Motion Capture; Human Pose Estimation; Camera Estimation		
• Research Problem: Studied monocular human reconstruction in the wild, where entangled human-camera motion and underused camera rotation and translation cues cause global trajectory drift and long-horizon error accumulation.		
• Method Contribution: As a co-first author, made core contributions to heading-angle decomposition and global-velocity modeling, explicitly leveraging camera rotation and translation to improve long-sequence accuracy.		
• Evaluation and Impact: Outperformed GVHMR and WHAM; replacing GVHMR's corresponding module further improved reconstruction under dynamic cameras. The paper was accepted and the algorithm was deployed in Tencent products.		
Paper: arxiv.org/abs/2509.04600		

SELECTED RESEARCH		
1. InfiniteDance: Scalable 3D Dance Generation Towards in-the-wild Generalization (Co-first Author; Core Contributor; Accepted at ECCV 2026)		Mar 2025 - Aug 2025
Keywords: Motion Generation; LLM; Human Animation; Motion Data Pipeline		
• Research Problem: Addressed poor generalization to unseen music, disordered motion semantics, and foot-related physical artifacts in open-world 3D dance generation.		
• Data Contribution: As a co-first author, made core contributions to an automated monocular motion-reconstruction pipeline and a foot-repair diffusion model, producing over 100 hours of high-quality multimodal 3D dance data.		
• Model Contribution: Made core contributions to ChoreoLLaMA, a scalable LLaMA-based choreography model that uses RAG for unseen music and a slow-fast MoE for tempo-adaptive motion generation.		
Paper: arxiv.org/abs/2603.13375 Project: infinitedance.github.io		
2. CameraOperator: Subject-Aware Camera Trajectory Generation (First Author; Core Contributor; Accepted at ACM MM 2026)		Jan 2026 - Apr 2026
Keywords: Camera Generation; Flow Matching; Video Generation		
• Research Problem: Addressed framing imbalance, gaze drift, and unstable camera-subject spatial relationships when generating long camera trajectories for dynamic subjects.		
• Data Contribution: As first author, made core contributions to BlockCam, a 41K-sequence benchmark combining Unreal Engine and real-video pipelines with aligned text, 3D subject states, and camera trajectories.		
• Model Contribution: Made core contributions to CameraOperator, a geometry-conditioned flow-matching model with explicit composition and line-of-sight supervision for stable long-horizon camera control.		
3. Controllable Video Generation: A Survey (Co-first Author; Core Contributor; under review at ACM Computing Surveys)		Apr 2025 - Aug 2026
Keywords: Controllable Video Generation; Diffusion Models; Camera Control; Multimodal Conditioning		
• Scholarly Contribution: As a co-first author and core contributor, analyzed how camera motion, depth, human pose, and other non-text conditions enter the denoising process of video diffusion models.		
• Taxonomy: Organized the literature into single-condition, multi-condition, and universal controllable generation, connecting control mechanisms, condition types, and application scenarios.		
• Open-source Output: Co-maintain Awesome-Controllable-Video-Generation as a continuously updated resource for controllable video generation research.		
Paper: arxiv.org/abs/2507.16869
